

MYSELF

Antonio Cerasa is **a researcher** at the National Research Council and **part-time lecturer of psychophysiology** at University Magna Graecia of Catanzaro. He is *a scientific writer and communicator* for several popular magazines

Antonio Cerasa is a cognitive and translational neuroscientist, interested in applying basic neuroscience research into clinical applications and behavioural therapies for the treatment of nervous system disorders.

His expertise is characterized by a broad background in **neurobiology and neurophysiology** of neurological and psychiatric disorders, with specific training in neuropsychology. He loves to collaborate with engineers for developing algorithms of **artificial intelligence**. Last but not least, his later field of interest concerns the **Positive Psychology**, a broad neuroscientific field focused on mental health and well-being.

He loves to get in touch with different realms and ways of thinking, aimed at disseminating knowledge, following the mindset of neuroscience.
