

**ALGORITHMS, DATA AND SECURITY A.Y. 2022/23**  
**Final on May 10th, 2023**

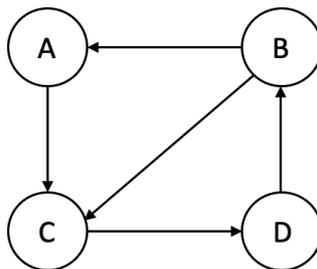

|                 |            |
|-----------------|------------|
| Surname _____   | Name _____ |
| ID number _____ |            |

**Question 1 (points 7)**

- a) Describe what is a cluster centroid and how we can measure the distance between two clusters.
- b) Explain the K-means clustering algorithm.
- c) Discuss the pros and cons of the K-means clustering algorithm, also with respect to the hierarchical clustering algorithm.
- d) How can we use this algorithm in a recommender system?

**Question 2 (points 9)**

- a) Describe the PageRank algorithm and explain its basic update rule.
- b) Apply the basic PageRank update rule for the first 2 iterations to the graph below, starting with page B having PageRank equal to 1 and all the other pages (A, C and D) with PageRank equal to 0.
- c) When does the PageRank algorithm terminate? Considering the graph below, which node(s) do you expect to achieve the highest score and why?
- d) Describe the goal of the centrality measure, explain a centrality measure of your choice different from PageRank and discuss how these two centrality measures differ.

**Question 3 (points 9)**

- a) Describe 2 cybersecurity attacks of your choice among those we examined.
- b) Explain how public key cryptography works.
- c) Discuss the pros and cons of public key cryptography.
- d) How do we use public key cryptography in the digital signature process?
- e) Explain what is a blockchain and how blocks are linked with one another.

**Question 4 (points 7)**

- a) Describe the goal and the steps of the collaborative filtering algorithm.
- b) Explain how do we measure similarity between users.
- c) Given the ratings shown in the following table, predict Tom's rating for Joker by applying the collaborative filtering algorithm.

|      | La La Land | Frankestein Junior | Avatar | Spider-Man | Joker |
|------|------------|--------------------|--------|------------|-------|
| Tom  | 3          | 4                  | 4      | 5          | ?     |
| Mary | 5          | 5                  |        | 3          | 4     |
| John | 2          |                    | 5      | 5          | 3     |
| Lucy |            | 4                  | 2      | 4          | 5     |

The similarity values are as follows:

|             |            |            |             |
|-------------|------------|------------|-------------|
| 1.00000000  | -0.8528029 | 0.8164966  | 0.08111071  |
| -0.85280287 | 1.0000000  | -0.6237783 | -0.12105003 |
| 0.81649658  | -0.6237783 | 1.0000000  | -0.49669963 |
| 0.08111071  | -0.1210500 | -0.4966996 | 1.0000000   |

- d)** How do we speed up the collaborative filtering algorithm when we have to deal with millions of users and movies?
