

Introduction to data analysis with Stata

Final exercise

Francesca Marazzi

Exercise

What are the determinants of health status, and to what extent is it influenced by earnings and working conditions?

- Use the BHPS data from 1994
- Health status variable: **hlstat**
- Provide at least one table or one graph showing average income by health status
- Use multivariate regression to study how health is affected by job-related characteristics and demographic factors.
- Export your graphs and tables.
- Comment you results.

Hint: Check the values of hlstat. Renaming it as 'unhealthy' might help
