Overview

The course analyses corporate finance issues looking to both the investment and the financing policy. Students will be able to understand strategic and practical investment/debt issues and to implement (through excel) standard capital budgeting technique and financial debt planning policy.

At the end of the course, students will be able to:

1. Use the NPV for evaluating real and financial investments;
2. Consider portfolio construction criteria and the impact on the firm's risk exposure;
3. Evaluate the impact of capital structure choices on the stakeholders.
4. Measure the impact of market imperfection on the firm's value

Syllabus

The course analyses corporate finance issues related to measuring the hurdle rates, select the best financing option and identify the proper dividend policy. Students will be able to understand strategic and practical investment/debt issues and to implement (through excel) standard capital budgeting technique and financial debt planning policy.

Main skills that a student is expected to have at the end of the course are:

1. Defining the hurdle rate for different types of investment
2. Measuring the investment return
3. Identify the best financial structure and the strategy of adjustment to the target leverage
4. Evaluate existing and expected investments in order to identify the proper dividend policy

Pre-requirements

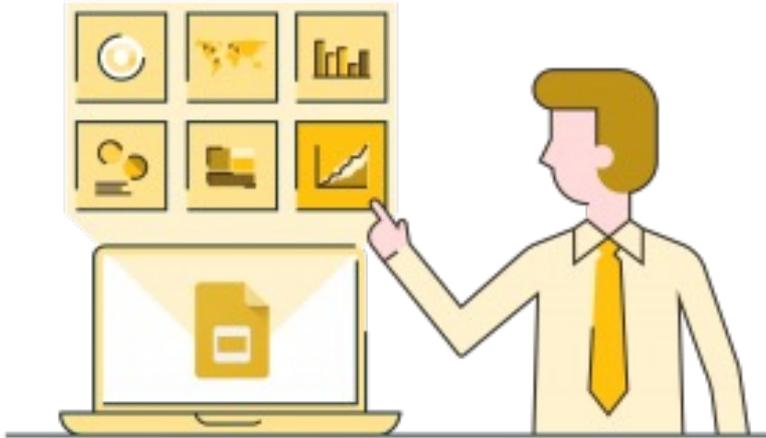

Students are required to have basic knowledge of mathematical finance, balance sheet analysis and excel.

Additional materials (videos on excel functions and video used during the lectures) will be available on the Moodle website

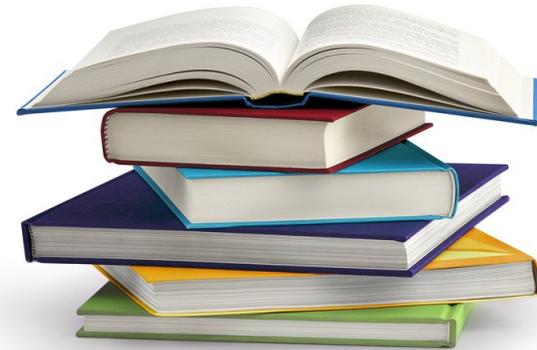

<https://esamionline.uniroma2.it/>
